No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

Sequence 1161, Application US/09538092

Patent No. 6753314

GENERAL INFORMATION:

APPLICANT: Giot, Loic

APPLICANT: Mansfield, Traci A.

TITLE OF INVENTION Protein-Protein Complexes and Method of Using Same;

TITLE OF INVENTION NUMBER: US/09/538,092

CURRENT FILING DATE: 2000-03-29

PRIOR APPLICATION NUMBER: 60/127,352

PRIOR APPLICATION NUMBER: 60/127,352

PRIOR APPLICATION NUMBER: 60/127,352

PRIOR PLING DATE: 1999-04-01

PRIOR PLING DATE: 1999-04-01

PRIOR PLING DATE: 1387-04-01

NUMBER OF SEQ ID NOS: 1387

NIX overexpression in cells actifactor NF kappa B. Cellular expression two TNF-metants blocks NF kappa B induction two TNF receptors, by CD95 (Fas/Apo-1) anning NORTI/FADD, adapter proteins that bind blocks NF kappa B induction by IL-1. NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA library
Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
HRI, and Biotechnology Center, National Institute of Technology and
Evaluation; clone selection for full insert sequencing: HRI and
RAB; annotation: HRI and RAB.
                                                                                                                                         AK131438 3152 bp mRNA linear PRI 07-MAY-2004 Homo sapiens cDNA FLJ16568 fis, clone TESOP2000390, highly similar to Mitogen-activated protein kinase kinase kinase 14 (EC 2.7.1.37).

DNA encoding tumour necrosis factor receptor-associated factor binding molecule - used for modulation or mediation in cells of the activity of NF-kB.

Claim 11; Fig 6; 127pp; English.

```
The present sequence encodes a NF-kappa inducing kinase (NIK). The full conditions as obtained by PCR using clone 10 (AAV03324). NIK was cound to induce NF-kappaB even more effectively than TRAF2. Proteins capable of binding to TRAF2 and NIK were identified. The NIK or TRAF-2 conditions are signaling activity modulated or mediated by TRAF2. TRAF-binding proteins are especially used for con mediated by TRAF2. TRAF-binding proteins are especially used for prevention or treatment of pathological conditions associated with NF-CC prevention or treatment of pathological conditions associated with NF-CC kappaB induction, e.g. acute hepatitis, autoimmune-induced cell death, c.g. death of the beta Langerhans cells or the pancreas that results in clidenates, the death of cells in graft rejection, the death of cells in graft rejection, the death of cells in graft rejection, the death of cells in graft rejection, the death of cells in graft rejection, the death of cells in graft rejection, the death of cells in graft rejection, the death of cells in graft rejection of the AIDS virus and AIDS sinhibited T cell suicide which causes proliferation of the AIDS virus and hence the AIDS disease. The proteins are also useful for screening of ligands compable of binding to a protein, which are useful for modulating cellular
                                                                                                                                                                                                                                                                                                                                                                                           ö,

```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain creation (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed construction of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed construction of (II) or to treat disease states involving (II). (II) is activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a copylypeptide in tissue, as molecular weight markers and as a food complement. (II) and its binding pattners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of involving aberrant protein espression or biological activity. The copyreptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations or responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this coding sequences of the printed specification, but was obtained in celectronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ATGITTGGAGGATGAGTATGTGTGGCAGAGGCACATAAACAGGCAGAGACCCTTTGCC 123
